25

## 1. A plasma display panel comprising:

a plurality of pairs of display electrodes, a pair of the plurality of pairs of display electrodes which are disposed parallel to each other on a front substrate and form a discharge gap for emitting light for display;

a dielectric layer, which is formed on the front substrate and covers the plurality of pairs of display electrodes excluding at least a part of the discharge gap; and

a data electrode disposed on a rear substrate, which is placed facing the front substrate across discharge space, in a manner to cross under the display electrodes.

## 2. The plasma display panel of claim 1,

wherein a thickness of the dielectric layer in a direction where the pair of display electrodes face each other is not larger than that in a direction where the pair of display electrodes face the rear substrate.

3. The plasma display panel of claim 1,

wherein a float electrode is disposed at the discharge gap, which is formed on the front substrate.

- 4. The plasma display panel of claim 3, wherein the float electrode is transparent for visible light.
- 5. The plasma display panel of claim 4,
  wherein the float electrode is formed of at least one of a narrow line and

a combination of narrow lines.
